

GOV-01A: Sanctions risk assessment

Exposure paths also include banks, processors, payment schemes and sub-merchants. Payment, crypto and sectoral risks remain medium until the missing controls are documented and tested. Acceptance conditions: no reliance on the SOP-17 or SOP-21 stubs, crypto limits alone are not sufficient, and complete screening, freeze and reject controls are in place across all products.

FIELD	VALUE
Document ID	GOV-01A (annex to GOV-01, same methodology)
Relationship	Assesses sanctions risk specifically, on the GOV-01 section 2 methodology and data basis. GOV-03 sets the policy; SOP-12 and SOP-21 implement. GOV-01 section 11 summarises this assessment; on divergence this document governs.

1 · Purpose

This assessment identifies where Mynta can encounter sanctioned persons, entities and activity, rates the exposure before and after controls, and states the conditions under which the residual position is accepted. It exists as a distinct assessment because the obligation is strict in character: intent is irrelevant, thresholds are absent, and a single missed true match is a breach.

2 · Exposure assessment

EXPOSURE PATH	DESCRIPTION AND EVIDENCE	INHERENT	RESIDUAL
Direct customer base	A listed person as customer, signatory or beneficial owner. 2025 experience: 2 true matches, both frozen and reported per SOP-21. Retail-heavy book lowers per-customer likelihood; volume raises encounter frequency.	MEDIUM	LOW
Ownership and control (50% rule)	Entities owned or controlled in total by listed persons, unnamed on any list. Discoverable only through SOP-10 ownership-structure evidence; merchant chains touch	HIGH	MEDIUM

roughly 40 jurisdictions. The dominant sanctions exposure of Mynta's shape.

Payment counterparties	Inbound and outbound payment parties within product area data; SEPA reach across the EEA with cross-border flow exposure per C-2.	MEDIUM	LOW
Crypto wallets and VASP counterparties	Listed or blocked addresses, cluster proximity, and counterparty VASPs under weaker regimes; speed and finality compress reaction time.	HIGH	MEDIUM
Circumvention structures	Layered ownership, third-country routing and renamed counterparties in the post-2022 environment; overlaps the complex-structure segment in GOV-01 section 6.	HIGH	MEDIUM
Sectoral and territorial measures	Restricted goods, sectors and territories reached through payments references and merchant trade; kept within limits by the business model (no trade finance, no correspondent activity) per GOV-03 section 4.	MEDIUM	LOW

3 · Controls relied on

Screening on identified persons at onboarding, delta and transaction level (SOP-12, C-4); list-update service levels per GOV-03 section 10; SOP-10 ownership-structure evidence standards as the discovery mechanism for the 50% rule, per GOV-01 conclusion C4; wallet screening and travel-rule data (SOP-17); cross-border flow and reference rules (SOP-18); immediate freeze-and-report on true matches (SOP-21); C-2 prohibited-band enforcement at any layer; annual screening effectiveness testing with seeding.

4 · Residual position and acceptance

The residual position is medium, carried by the ownership-and-control, crypto and circumvention paths. It is accepted on three standing conditions. First: ownership-structure evidence quality does not degrade. A SOP-10 QC deterioration is a sanctions control failure, not only an onboarding one. Second: the list-update and screening-coverage service levels hold, documented in the update log and in annual testing. Third: the Crypto Service operates inside its C-8 limits. Breach of a condition triggers out-of-cycle review of this assessment and of GOV-01 section 11.

5 · Review and triggers

Reviewed annually with GOV-01. Out-of-cycle triggers: material regime change or new programme; a missed true match or a near-miss found in testing; SOP-10 QC findings at critical grade touching ownership-structure evidence; C-8 bound breach; and supervisory communication on sanctions controls. Changes are recorded in the GOV-01 Appendix D change history with this annex's own entries.
