

GOV-03: Sanctions policy

Company	Mynta AB
Last approval date	2026-09-10
Approved by	CEO
Document type	Policy
Document owner	MLRO
Information class	Open internally, confidential externally

Versioning

DATE	VERSION	CHANGES	BY
2026-09-07	1.x	Earlier versions per the change notes in this document	Document owner
2026-09-10	2.0	Rewritten in plain language. No rules changed.	Document owner

FIELD	VALUE
Document ID	GOV-03
Interfaces	SOP-10 (chains), SOP-12 (screening), SOP-21 (freeze), C-2, C-4; GOV-01 section 11

Change history

VERSION	DATE	CHANGE	APPROVED
1.0	2026-09-07	First complete	Superseded
1.1	2026-09-07	Definitions, sectoral measures, testing cadence	Approved

1 · Purpose and position

Sanctions compliance is absolute in character: obligations apply regardless of intent, knowledge thresholds are low, and a single missed listed party is a breach. This policy states which regimes bind Mynta, how exposure is found, and what happens on a match. It is deliberately short; the operational weight lives in SOP-12 and SOP-21, and the ownership structure-quality dependency lives in SOP-10, per GOV-01 conclusion C4.

2 · Legal basis and list regime

Binding: EU restrictive measures, directly applicable as regulations, including asset freezes and sectoral prohibitions; UN measures as implemented in EU law; Swedish national measures under lag (1996:95) om vissa internationella sanktioner. Supervision and enforcement sit with Finansinspektionen and prosecuting authorities.

Risk-based additional screening: designated OFAC programmes. Three different things are kept apart here. What binds Mynta as law is the EU and Swedish framework above; US sanctions do not apply to Mynta directly absent a US connection. What exists nonetheless is secondary-sanctions

exposure: US measures can reach non-US institutions commercially, through loss of counterparties and dollar access. And what applies contractually is the schemes' and the BIN sponsor's expectation that designated OFAC programmes are screened. On that basis, and as a documented risk decision of this policy, the designated programme set is screened; it is recorded in the C-registers and reviewed with the vendor configuration.

3 · Definitions

Listed person	A natural or legal person designated under a regime in section 2, or treated as designated under section 5.
Freeze	Prevention of any move, transfer, alteration, use of, access to or dealing with funds and economic resources.
Making available	Any provision of funds, services or economic resources, direct or indirect, including through intermediaries.
Circumvention	Participation in activities whose object or effect is to defeat a measure, including knowingly enabling structures used for that purpose.
True match	Per C-4: a confirmed match, or a hit that cannot be dismissed on evidence.

4 · Sectoral and territorial measures

Beyond list-based freezes, regimes in force impose sectoral prohibitions (finance, energy, defence, dual-use and listed goods) and territorial restrictions. Mynta's exposure to these is limited by its business model: no trade finance, no correspondent activity, no cash. The residual exposure paths are: acquiring merchants whose trade touches restricted sectors or dual-use goods; cross-border payments referencing restricted goods, services or territories; and the crypto Crypto Service's counterparty exposure. The relevant prohibitions include the territorial restrictions in force (occupied and embargoed territories) and the sectoral measures on finance, energy, defence and dual-use items. Controls per channel: SOP-15 underwriting and C-7 category governance ask the sectoral questions before a merchant is signed, not after; C-2 prohibited-band enforcement applies at any level of the ownership structure; SOP-18 cross-border flow and reference screening runs per the register, and payment-reference screening alone is not treated as a reliable dual-use control; every restricted-sector indication escalates to the MLRO before execution, and permit questions follow section 9. Where a sectoral question cannot be resolved from the regime text, external counsel shall be engaged before the transaction proceeds.

5 · Prohibitions

- No funds or economic resources are made available, directly or indirectly, to or for the benefit of a listed person or an entity owned or controlled by one.
- Frozen assets are not dealt with, moved or released except under a licence or exemption lawfully obtained.
- No participation in, and no facilitation of, circumvention: structures, routings or renamings whose purpose or effect is to defeat measures are treated as the measure applying.

- No customer relationship is maintained with a listed person; discovery triggers SOP-21 immediately.

6 · Ownership and control: the 50% rule

The EU and US rules differ and are applied separately. Under the EU framework, ownership and control are two separate tests: an entity owned 50% or more, in total, by listed persons is treated as listed, and so is an entity a listed person controls, and control can exist below 50%. Under OFAC's 50 Percent Rule, total ownership of 50% or more is what makes an entity blocked; control alone does not automatically block it, but it is a risk factor handled through this policy's escalation route. Total ownership is discoverable only through the SOP-10 ownership structure work; this policy therefore adopts GOV-01 conclusion C4 as its own: ownership-structure evidence standards are a sanctions control, and an ownership structure that would not support the 50% computation does not support onboarding. Control is assessed on the SOP-10 S4.2 criteria. Where an alert is unresolved, the affected funds and transactions are put on immediate hold and the investigation is urgent; the formal freeze follows as soon as the legal threshold is met, per SOP-21.

7 · Screening obligations

Who: customers, beneficial owners as identified (not as declared), directors and signatories, intermediate ownership structure entities, payment counterparties within product area data, and, on the Crypto Service, wallet addresses per SOP-17. When: at onboarding before activation; ongoing, with delta-screening on every list update against the full base; at transaction level for payments and Crypto Service activity; and on any event that changes the persons in a relationship. How: per SOP-12, with match the decision on hits per C-4; near-match dismissing requires recorded rationale on mismatched secondary identifiers and is never based on the customer's own assurance.

8 · On a match

A confirmed match triggers SOP-21 without customer notification: freeze of funds and suspension of services, no execution of pending transactions, reporting to the competent authorities without delay, and MLRO ownership of everything thereafter. A match that cannot yet be dismissed triggers an immediate hold on the affected funds and transactions and an urgent investigation, and converts to a freeze the moment the legal threshold is met. Suspicion arising with the match is assessed under SOP-20 in parallel. Deciding to "monitor while clarifying" instead of freezing is not an available option and would be a breach of this policy.

9 · Licences and exemptions

Frozen funds may in some situations lawfully be released or used, but only with a permit from the competent authority. The typical grounds are set out in the regimes themselves: basic living costs, legal fees, or payments under contracts that predate the listing. Where such a ground may exist, Mynta applies to the authority; nothing moves before the permit is in hand and its conditions are met exactly. Permit handling is MLRO-owned, documented, and reported to the board.

10 · Governance

The MLRO owns this policy's operation: list updates applied without undue delay from the moment they take legal effect, weekends included: same-day ingestion as the operating standard, emergency manual controls while an update propagates, blocking on too old lists, and full-base delta screening after every update. Vendor SLAs support this but do not transfer Mynta's responsibility, configuration and tuning of the screening system with test evidence retained, the C-2 category list's sanctions-driven entries, and breach and incident handling with supervisory notification where required. Screening effectiveness (coverage, match quality, dismiss discipline) is tested at least annually and after material configuration change, with results in the MLRO report. Training per GOV-02 section 9 includes sanctions modules for relevant roles.

11 · Records and review

Screening records, decisions on hits, freezes, reports and licence files follow GOV-02 section 8 retention. This policy is reviewed annually and immediately upon material regime change, with the change history maintained alongside.
