

SOP-13: Enhanced due diligence routine

Company	Mynta AB
Last approval date	2026-09-10
Approved by	MLRO
Document type	Work procedure
Document owner	Senior analysts
Information class	Open internally, confidential externally

Versioning

DATE	VERSION	CHANGES	BY
2026-09-07	1.x	Earlier versions per the change notes in this document	Document owner
2026-09-10	2.0	Rewritten in plain language. No rules changed.	Document owner

FIELD	VALUE
Implements	GOV-02 §7 enhanced measures; C-9; GOV-01 conclusion C1
Referrals in	SOP-10 S6.2, SOP-11, SOP-12 S2.4/S2.5, SOP-22 events, SOP-19 outcomes
Output	EDD report per template T-3; decision routing per C-6

1 · Purpose and principle

Enhanced due diligence deepens the understanding of a relationship where the risk concentrates: more evidence, stronger confirmation by a second source, senior decisions, tighter monitoring. The principle is proportional depth: the measures fit the trigger. A the high-risk category connection calls for geographic and counterparty depth. A PEP calls for wealth-and-funds depth. There is no single maximal checklist applied to everything. The report shall state whether the risk is acceptable, kept within limits and monitorable, on what basis, or conclude that it is not.

2 · Triggers

Mandatory, per C-9 and law: any PEP connection; any high-risk-category or EU high-risk third-country connection; ownership chains of three or more layers or any legal-arrangement layer; expected or actual crypto share at or above 30%; confirmed designated adverse media. By referral: SOP-19 investigation outcomes that keep the relationship, SOP-22 event findings, GOV-04 restricted categories that condition holding on EDD (licensed PSPs and MSBs, crypto-sector businesses, NPOs), and any file a decision-maker chooses to route here, with the reason recorded. Where several triggers apply at once, the scope covers the measures for all of them, without doing the same measure twice.

3 · Measures by trigger

A first payment from an account in the customer's own name may be used as a supporting control for high-risk-category customers. It is applied risk-based and never replaces the enhanced measures.

TRIGGER	CORE MEASURES
PEP connection	Source of wealth and source of funds for the PEP's interest; mandate and career mapping; approval by the authorised senior decision-maker the governance framework designates; enhanced monitoring profile; 12-month review, with PEP treatment continuing for at least 18 months after the function ends and for as long as the risk warrants
the high-risk category / high-risk third country	Confirmation by a second sourced ownership-structure evidence for every layer touching the jurisdiction; purpose-of-relationship deep-dive; counterparty and cross-border flow expectations documented; first-activity scrutiny window in SOP-18
Complex structure	C-3 examination of each level to 10%; second-source confirmation by a second source of the decisive layer; rationale for the structure obtained and assessed for economic sense; any nominee or arrangement resolved to principals or declined per GOV-04
Crypto share ≥ 30%	Wallet and counterparty picture at declaration level; SOP-17 screening results reviewed; Crypto Service caps set per class; Crypto Service-specific monitoring profile
Adverse media	Source credibility and specificity assessment; underlying-conduct analysis against Mynta's exposure; outcome documented even where dismissed
Restricted categories	Licence verification and scope; business-model mapping; downstream-anonymity check; condition compliance per GOV-04 §3

4 · Procedure

- S1 Intake: the referral states its triggers and attaches the file. The EDD owner (a senior analyst) confirms that the triggers are read correctly, and logs the case with target dates aligned to C-5.
- S2 Scoping: select the measures from section 3 for every trigger present, and record them as the EDD plan. If a measure is deliberately left out, write down that it was left out, and why.
- S3 Collection: evidence to section 5 standards; requests to the customer are consolidated where possible and logged; IF the customer cannot or will not evidence a scoped item, THEN the report says so plainly and treats it as a finding. Scoped items shall not be omitted from the report.
- S4 Analysis: the report (T-3) answers the scoped questions, states what was confirmed by a second source versus taken on documentation alone, and concludes with a risk view and recommended conditions (caps, monitoring profile, review cycle). The T-3 report covers the triggers, the scope, the evidence, source of funds and wealth, red flags, unresolved issues, the risk conclusion, any conditions, the monitoring set, and the approvals.

- S5 Decision: per C-6 the MLRO decides all EDD-routed files; for PEP files the decision is taken by the authorised senior decision-maker the governance framework designates. Possible outcomes: approve with conditions, approve, decline, or route to SOP-19/20 where the analysis itself raises suspicion.
- S6 Implementation: conditions written into the monitoring baseline and SOP-22 schedule before activation or continuation; SOP-18 profile set per the report.
- S7 Records: plan, evidence, report and decision filed per GOV-02 §10; the file must let a reviewer see what was asked, what was answered, and why the conclusion followed.

5 · Evidence standards for source of funds and wealth

Source of funds explains the money in the relationship; source of wealth explains how the person came to have wealth at all. Both are documented on a hierarchy: independent and verifiable first (audited accounts, registry filings, completed-transaction documents, tax records), institutional second (bank statements, employer confirmations), self-produced last and never alone (declarations, CVs). Evidence is selected for the fact it must prove; the order above states preference, not exclusion. Confirmation by a second source means two independent sources agreeing on the material fact. Reasonable is assessed against scale: the wealth shall be explainable by something documented, such as a career, a business history or completed transactions. A thick pile of documents does not replace that explanation. The report states which level of the hierarchy each material fact rests on.

6 · Timelines and quality

EDD suspends the referring routine's decision clock; target completion is 15 business days from complete referral for single-trigger cases and 25 for stacked triggers, with delays logged and visible in the MLRO report. Quality: 100% second review before decision per the SOP-10 §13 second review standard; EDD reports are drawn at random in the monthly QC alongside onboarding files, graded on the same scale.
