

SOP-19: Alert investigation and escalation routine

Company	Mynta AB
Last approval date	2026-09-10
Approved by	MLRO
Document type	Work procedure
Document owner	Monitoring function
Information class	Open internally, confidential externally

Versioning

DATE	VERSION	CHANGES	BY
2026-09-07	1.x	Earlier versions per the change notes in this document	Document owner
2026-09-10	2.0	Rewritten in plain language. No rules changed.	Document owner

FIELD	VALUE
Implements	GOV-02 §9 examination duty; rules C-5, C-6
Intake from	SOP-18 alerts, SOP-12 escalations, SOP-10 S4.5 memos, SOP-22 events, fraud loop referrals, internal staff reports
Routes out	SOP-20 (report), SOP-21 (freeze), SOP-13 (EDD), SOP-22 (review), SOP-23 (exit), SOP-18 (tuning feedback)

1 · Purpose and scope

Every signal that needs examining flows through this routine. It owns the path from signal to closing decision. The examination duty in GOV-02 §9 is discharged here. That sets the quality bar: closing an alert without a genuine examination is a breach of GOV-02 section 9.2. The routine also owns the internal reporting channel. Any employee, in any role, can raise a suspicion here or directly with the MLRO, using a simple dedicated form, the customer, the facts, the transactions, the urgency and the supporting documents, kept separate from the whistleblowing channel, is logged like any other intake, and carries protection against reprisal per the whistleblowing procedure.

2 · Definitions and closing decisions

Alert	Any signal requiring examination, whatever its source.
Case	One or more linked alerts on one customer or connected customers, examined together.
Closing decisions	Close, no finding; close with note (fact recorded to the profile, no suspicion); refer to SOP-13, SOP-22 or SOP-23; refer to the MLRO for SOP-20 assessment; SOP-21 immediate (sanctions). Every closing decision carries a written rationale.

3 - Procedure

- S1 **First sorting.** Within the priority SLA (section 5): deduplicate, link to the customer and any related open items, and set priority: sanctions-linked immediate, active-fraud-linked urgent (same day), all else standard. IF the alert concerns a file the analyst personally onboarded or decided, THEN it is reassigned; nobody examines their own decisions.
- S2 **Context assembly.** Pull the monitoring baseline (SOP-10 §16 data), the due-diligence file, screening records, prior alerts and their closing decisions, and activity across all product areas per GOV-01 conclusion C5. The closing options are: duplicate alert; false alert; explained, with the explanation verified; profile update required; fraud referral; system error; and suspicion, routed to SOP-20. An examination performed on the triggering transaction alone, without the total view, does not meet the standard.
- S3 **Examination.** Establish what actually happened and whether it makes sense against the customer's profile and the typology the rule encodes. The record separates facts (each with its source) from assessment. Findings of "unusual but explained" name the explanation and its evidence; "explained by the customer" without confirmation by a second source is recorded as exactly that.
- S4 **Customer contact.** Requests for information are permitted and often necessary; where the contact itself could create a tipping-off risk, the MLRO is consulted first; they are worded neutrally (documentation requests, activity clarification), never disclosing examination, suspicion or reporting, per meddelandeförbudet. Deadlines are set and logged. IF the customer does not respond by the deadline plus one reminder, THEN the non-response becomes a finding in its own right and routes to SOP-22 or SOP-23 assessment.
- S5 **Second review.** Second review before closure for: repeated alerts on the same customer, connected customers, large transactions, cases closed mainly on the customer's explanation, and any case touching a high-risk or PEP relationship, any case with a prior SAR on the customer, any close-no-finding on an urgent-priority case, and any closing decision the analyst marks uncertain. The reviewer is never the examining analyst.
- S6 **Closing decision and routing.** Close or route per section 2. IF examination leaves reasonable grounds to suspect, or cannot dispel them, THEN the case goes to the MLRO for SOP-20 assessment; uncertainty after examination is a reason to escalate, not to close. Referrals carry the assembled context, so the receiving routine does not start from zero.
- S7 **Feedback.** Every closing decision tags alert quality (true concern, reasonable but benign, rule noise); the tags are added up monthly and feed SOP-18 tuning through its change control. This feedback loop is what keeps alert quality workable at Mynta's volumes.

4 - Case records

Per case: intake source and time, priority, context assembled, facts with sources, customer contacts verbatim, assessment, closing decision with rationale, reviewer where S5 applied, and routing. The reconstruction standard from SOP-10 S7.2 applies: a reader with the record alone can follow the reasoning to the closing decision.

5 · Timelines and queue governance

The first review target is 3 business days, and sooner is better. Once suspicion is formed, reporting follows SOP-20 without delay. No case ages past 15 days without escalation to the MLRO, and overdue cases escalate from the due date.

EVENT	STANDARD (C-5)
Sanctions-linked	Immediate; SOP-21 first, examination after
Urgent (active fraud, live risk)	First sorting and first action same business day
Standard first-line review	Within 3 business days of alert
Escalation to senior or MLRO	Within 24 hours of the escalating closing decision
Case aging	Open cases over 15 business days appear by name in the MLRO's queue review; over 30, in the MLRO report

Queue health (volumes, aging, closing decision mix, per-rule noise rates) is reviewed weekly by the senior analysts and monthly in the MLRO report; sustained backlog shall be escalated to management as a resourcing decision and shall not reduce examination quality.

6 · Quality control

Monthly re-review of a random selection: 10% of close-no-finding closing decisions re-examined by a senior analyst not involved in them, graded on the SOP-10 §13 scale; all reopened cases logged with cause. Grading looks for the two failure modes in order of harm: closes that missed the point, and escalations that merely moved work without examination. Findings feed training and, where a rule generates systematic noise, SOP-18 tuning.
