

SOP-25: Regulatory change management instruction

Company	Mynta AB
Last approval date	2026-09-10
Approved by	MLRO
Document type	Instruction
Document owner	Head of Legal & Compliance
Information class	Open internally, confidential externally

Versioning

DATE	VERSION	CHANGES	BY
2026-09-07	1.x	Earlier versions per the change notes in this document	Document owner
2026-09-10	2.0	Rewritten in plain language. No rules changed.	Document owner

FIELD	VALUE
Implements	GOV-02 §16 currency of the framework; GOV-01 §15 event triggers
Primary surface	The GOV-02 §15 implementation map and the full document inventory

1 · Purpose

The framework shall be kept current with regulation, deliberately and on record. This instruction sets the loop: capture what changed, decide whether it touches Mynta, find the gaps precisely, correct with owners and dates, and verify the change actually happened. Quality is judged against two failure modes. A missed gap leaves the institution non-compliant. A false gap consumes change capacity for nothing. The relevance and gap analyses are therefore held to the same evidence discipline as casework.

2 · Sources and cadence

Monitored sources include the EU Official Journal, EBA and ESMA guidelines and Q&As, Finansinspektionen's regulations and communications, FATF publications, and the industry guidance the function designates. The source list is reviewed at least annually.

SOURCE	WATCHED FOR	CADENCE
EU Official Journal / EUR-Lex	Regulations and directives in the AML/CTF, payments, e-money, crypto and data perimeter (AMLR, AMLD packages, TFR, MiCA and their amendments)	Weekly sweep; alerts on tracked instruments
EBA	Guidelines, RTS and ITS drafts and finals, opinions, Q&As touching Mynta's activities	Weekly
Finansinspektionen		Weekly

FFFS changes and consultations, supervisory communications, sanction decisions against peers (read as expectations), reporting-requirement changes

Finanspolisen and national sources	Typology publications; SOU and propositioner amending penningtvättslagen or adjacent law	Monthly, plus event alerts
FATF and supranational	List changes (feeding C-2 via GOV-03), typologies, mutual evaluations of relevant jurisdictions	On publication

Every sweep is logged even when empty; an unlogged week indicates a missed sweep.

3 · Procedure

- S1 **Capture.** Each item enters the regulatory change register with: source, instrument and provision, publication date, entry-into-force and application dates, and a one-line subject. Transitional structures (a regulation in force but applying later, an RTS pending under a level-1 text) are captured with both dates, because the gap analysis in S3 depends on knowing which regime governs when.
- S2 **Relevance first sorting.** In scope or not, with a recorded reason either way. The test is Mynta's activities and perimeter, not the instrument's headline: a banking-specific rule can still touch the safeguarding bank relationship, and a headline AML change can be out of scope where it addresses activities Mynta does not perform. Out-of-scope calls are drawn at random in the annual look-back because first sorting errors are the least visible failure point.
- S3 **Gap analysis.** For in-scope items, map the provision against the framework through the GOV-02 §15 implementation map and then the affected documents themselves, clause by clause where the provision is specific. Each finding is classified: **compliant** (covered), **partly compliant** (covered with gaps), **missing** (obligation with no implementing text), **conflicting** (framework says otherwise), **not applicable** (documented, with the reason), **future requirement** (not yet applying, tracked to its date), or **superseded** (framework implements the old regime), or **compliant** (covered, with the covering reference cited). The analysis records the legal-hierarchy reading where sources stack: what is directly applicable, what is binding national implementation, what is comply-or-explain, and which provision governs during transition. A gap list without the compliant findings shall not be accepted; coverage shall be documented, not assumed.
- S4 **Correction plan.** Per gap: the change (document text, control, system configuration, training), the owner from the document-ownership register, the date, and any interim measure where the application date arrives before the fix. Interim measures are themselves logged as deviations where they fall short of a live obligation.
- S5 **Approval.** Policy-category and appetite changes route to the board; routine-category to the MLRO; GOV-01 impacts trigger its §15 event review. Approvals reference the register item so the record links the legal source to the implemented change.
- S6 **Implement and verify.** The owner delivers; the compliance function verifies the delivered text or control against the gap it closes, and only verification closes the register item. Training content is updated where the change touches operating roles.

4 · The AMLR programme

Regulation (EU) 2024/1624 applies from 10 July 2027 and is run as a standing workstream, not as individual sweep items. The workstream maintains four things: an article-by-article inventory mapped to the framework; the tracked RTS and guideline dependencies, each with its own dates; a re-baselining of GOV-01 ahead of application, per its trigger; and a transition calendar, so that documents citing penningtvättslagen provisions that the AMLR displaces are re-anchored before the date, not after it. Progress is a standing item in the quarterly MLRO report until closure.

5 · Register and reporting

The regulatory change register carries every item from capture to verified closure with its classification history. Quarterly reporting to the board via the MLRO report: new in-scope items, open gaps by age and severity, overdue corrections by owner, and AMLR programme status. An open gap past its application date is reported as a compliance incident under GOV-02 §14, whatever the correction status.

6 · Quality and review

Annual look-back: sample of out-of-scope first sorting calls re-reviewed; closed gaps re-verified on a sample; timeliness measured from publication to first sorting and from application date to closure. This instruction is reviewed annually and immediately when the sources themselves change shape, as they will when AMLA guidance begins issuing.
