

SOP-15: Merchant acquiring underwriting (stub)

Company	Mynta AB
Last approval date	2026-09-10
Approved by	MLRO
Document type	Stub collection
Document owner	MLRO
Information class	Open internally, confidential externally

Versioning

DATE	VERSION	CHANGES	BY
2026-09-07	1.x	Earlier versions per the change notes in this document	Document owner
2026-09-10	2.0	Rewritten in plain language. No rules changed.	Document owner

Full version in wave 2. The points below bind now; other documents cite them.

Purpose

Underwriting standards for acquiring merchants: business verification beyond KYB, MCC assignment and C-7 enforcement, processing-history assessment, chargeback and refund expectations, and settlement configuration.

Binding points

- Every merchant passes SOP-10 in full before underwriting concludes. Underwriting adds to KYB; it never substitutes.
- MCC assignment follows C-7. Conditional categories require the condition documented before activation.
- The SOP-10 Appendix D checks are the onboarding-analyst subset of this document's standards.
- Underwritten volume, ticket profile and chargeback expectation are written to the monitoring baseline and drive R-ACQ parameters.
- Undisclosed prior terminations discovered later are SOP-22 events.
- MCCs follow the card-scheme rules and the merchant's actual activity, not the application alone.

SOP-16: Card programme limits and controls (stub)

Full version in wave 2. The points below bind now.

Purpose

Card limits by risk class, ATM caps, geographic controls, and the card-specific fraud interface.

Binding points

- Limits and ATM caps per risk class live in the card limit register; values shall not be written into routines.
- High-risk customers receive reduced ATM caps; changes route through the SOP-18 change-control pattern.
- Card activation follows SOP-10/11 outcomes only; no card ships before the monitoring baseline exists.
- KYC approval alone does not activate a card: fraud, security and authentication checks are completed first.

SOP-17: Crypto operations, wallet screening and travel rule (stub)

Full version in wave 2. The points below bind now.

Purpose

Operational controls on the Crypto Service: counterparty wallet screening, travel-rule data handling under Regulation (EU) 2023/1113, VASP counterparty due diligence, and the signal interface into R-CRY rules.

Binding points

- Wallet screening runs on every Crypto Service transaction; sanctioned-wallet signals route to SOP-21 immediately.
- Travel-rule data completeness is a data incident when missing, per the SOP-18 section 7 pattern.
- For self-hosted wallet transfers above register values, take adequate measures to assess whether the address is owned or controlled by the customer, per the register method.
- Coordination with Mynta Digital AB follows the GOV-02 section 10 arrangement; each entity's obligations remain its own.

SOP-21: Sanctions freeze and reporting (stub)

Full version in wave 2. The points below bind now.

Purpose

Execution of asset freezes on true matches and non-dismissable hits: immediate actions, reporting, and ongoing administration.

Binding points

- Freeze first, analyse second. No customer notification. No execution of pending transactions.
- Freeze covers funds and services: accounts, cards, acquiring settlement and Crypto Service access simultaneously.
- Reports to the competent authorities without delay; MLRO owns all handling thereafter.
- Release only under GOV-03 section 9 licence handling.
- Every freeze is logged with timestamps; SOP-19 and SOP-20 assessments run in parallel where suspicion exists.
- A temporary operational block is kept separate from a legal asset freeze, and Finansinspektionen is the reporting authority for freezing actions.

SOP-22: Ongoing due diligence and review (stub)

Full version in wave 2. The points below bind now.

Purpose

Periodic reviews by risk class, event-driven reviews, and maintenance of customer information and baselines.

Binding points

- Intervals: high 12 months, medium 24, low 36; PEP files 12 regardless of class.
- Event triggers include: ownership change, screening deltas, SOP-19 close-with-note closing decisions, returned contact channels, discovered prior terminations, and post-approval PEP or the high-risk category discoveries.
- Reviews use T-4 and re-run SOP-14; outcomes route per the T-4 outcome set.
- Overdue reviews appear by name in the MLRO report at 30 days past due.
- Fixed review cycles never replace continuous and event-driven review, and an overdue review escalates from its due date.

SOP-23: Exit and termination (stub)

Full version in wave 2. The points below bind now.

Purpose

Risk-driven termination of relationships: grounds, decision, timing coordination with reporting, customer communication, and funds handling.

Binding points

- Risk exits use T-6 and decide at MLRO level.
- Exit timing and wording shall not disclose examination or reporting, per SOP-20 section 6.
- The GOV-02 section 6 prohibition cases (due diligence cannot be completed) route here and are mandatory exits.
- Exited entities enter the declined and exited registers consulted at SOP-10/11 intake.
- Exit handling covers remaining balances, frozen funds, notice periods, chargebacks, and retention of the exit-register data.

Governance stubs: GOV-05 to GOV-09

Full versions in wave 2. The points below bind now.

GOV-05 Safeguarding

Customer funds are safeguarded at Norrbank AB under the segregation method; reconciliation daily; safeguarding is out of AML scope but its counterparty risk appears in GOV-01 batch data. The safeguarding scope is stated: which funds, which accounts, which reconciliation.

GOV-06 Internal audit charter

Independent examination per GOV-02 section 11; plan approved by the board; findings tracked to closure. Internal audit is independent, works to a risk-based plan, and reports directly to the board.

GOV-07 Data protection interface

AML retention is a legal obligation prevailing over erasure for its period; conflicts route to the DPO and MLRO jointly; access to SAR material is restricted per SOP-20 section 5. The erasure exception is limited to data legally required for the applicable retention period, nothing wider.

GOV-08 Outsourcing and vendor governance

Screening, identity and infrastructure vendors are material arrangements: contracts, performance review, exit plans; responsibility never transfers; vendor performance reviews feed the QC cycle. DORA ICT arrangements are handled separately from other outsourcing, with classification, FI notification where required, audit rights, subcontracting terms, and tested exit plans.

GOV-09 Product and change approval

New products, product areas, tokens and material feature changes require documented risk assessment against GOV-01, MLRO sign-off, and board approval where appetite moves; C-8 approved list additions route here. Reviews cover Legal, Compliance, Risk, the DPO, the CTO, Finance and safeguarding, and the FI is notified where a change affects the business model.

OP-01: Complaints handling (stub)

Full version internal per REG-D. The points below bind the FCP framework now.

Binding points

- Complaints are received free of charge, registered, acknowledged and answered within the published time limits, with a register and root-cause reporting to management.
- A complaint that reveals a possible framework breach is also an incident under GOV-02 section 14.
- A complaint touching examination, reporting or a freeze is answered without disclosing any of them; wording routes through the MLRO function per SOP-20 section 6.
- If no answer can be given within 14 business days, the complainant is told when one is expected.

OP-02: Whistleblowing (stub)

Full version internal per REG-D. The points below bind now.

Binding points

- An independent, confidential channel exists for reporting suspected breaches, open to all staff; reports may be made anonymously.
- Reprisal against a reporter is prohibited and is itself an incident; investigations report to the board.
- Suspicion of money laundering or terrorist financing may always be raised directly per SOP-19 and T-5; the channels coexist and neither replaces the other.
- The channel covers employees, contractors, trainees, management and active shareholders, with acknowledgement within 7 days and feedback within 3 months.

OP-03: Training programme and register (stub)

Full version internal per REG-D. The points below bind now.

Binding points

- Role-based training per GOV-02 section 11: all staff annually; onboarding, monitoring and screening roles on their routines and current typologies; management on governance; the board briefed annually.
- Completion is registered and attested; the register evidences competence for authority levels, including SOP-10 section 18.
- QC findings and typology changes feed content through the MLRO report.
- Training covers new starters and change-driven training when the BWRA updates or new products or markets launch, with effectiveness tested: attendance alone does not prove competence.

OP-04: Record retention schedule (stub)

Full version internal per REG-D. The points below bind now.

Binding points

- FCP records retain five years from relationship end or transaction execution, ten where law requires or an authority orders, per GOV-02 section 10.
- Every record class has an information owner, a retrieval standard and a deletion path; legal hold suspends deletion.
- Retention under the FCP framework prevails over erasure requests for its duration, with conflicts handled per GOV-07 jointly by the DPO and the MLRO.
