

Reviewer notes: open questions per document

Collected from the working drafts. These do not appear in the pack documents. Rule on each; corrections propagate to the affected document and, where marked, to the pilot rubrics.

GOV-01 · Business-wide risk assessment

Expert pass wanted on: ratings and their arguments (especially acquiring high, crypto very-high-bounded-to-high, channel high-to-medium); the section 13 acceptance formulations against FI practice; the conclusions C1 to C10 as binding style; the typology catalogue's realism; anything a 60-to-90-page BWRA carries that this structure still lacks, with the honest note that Mynta's smaller-EMI calibration argues for the lower half of that range.

GOV-02 · AML/CTF policy

Expert pass wanted on: the 5.1 to 5.3 duty enumerations against FFFS 2017:11; the occasional-transaction position; the 7.5 and 7.6 statements; the section 13 control-plan and self-assessment design; and any statement a Swedish EMI board policy carries that this draft still lacks.

GOV-03 · Sanctions policy

Expert pass wanted on: the OFAC stance formulation; the 50%-rule treatment and its freeze-first ordering; list-update SLA realism; and whether Swedish practice expects an explicit sectoral-measures section (dual-use, trade restrictions) at an EMI of this profile or leaves it at the transaction-screening level.

GOV-04 · Customer risk appetite

Expert pass wanted on: the prohibited list against real Swedish EMI practice; the metric values in section 5 as plausible board numbers; the restricted-category conditions; and whether adult content beyond live-streaming, CBD, tobacco and similar conditional sectors should appear here rather than resolving through C-7.

SOP-10 · KYB onboarding routine

Expert pass wanted on: the section 5 matrix against real Swedish practice (especially stiftelse and ekonomisk förening rows); the 7.2 language and legalisation standards; SDD scope in section 9; the review intervals in Appendix C; SLA values in S1.2 and S1.4; and anything a real 20-page KYB routine contains that this one still lacks. S4.2, S4.3, S4.5 and S5.1 are pinned by the pilot case; changes there propagate to the Halvix rubric.

SOP-11 · KYC onboarding routine

Expert pass wanted on: the automated approval and decline boundaries in S6.2 and S6.3; the address non-verification position at S2.5; the sole-trader interface with SOP-10; the 2% sampling rate for straight-through approvals; and the Appendix B list against what consumer desks actually see.

SOP-12 · PEP and sanctions screening

Expert pass wanted on: the designated adverse-media category set; the S2.2 two-identifier standard against practice; delta-screening SLA realism at Mynta's base size; the 5% discount-sampling rate; and whether a real routine carries an explicit ongoing-PEP-rescreen cycle beyond delta screening.

SOP-13 · Enhanced due diligence

Expert pass wanted on: the measures-by-trigger mapping against practice; the SoF/SoW hierarchy wording; timeline realism; whether first-payment-from-own-account verification belongs as a standard Tier 3 measure; and the T-3 report structure (drafted with the templates batch).

SOP-14 · Risk scoring methodology

Expert pass wanted on: factor values and weights as plausible desk arithmetic; the band cut-offs; the downward-only override design; whether industry risk should be a register (C-style list) rather than a two-value factor; and the validation set a real MLRO would demand beyond section 7.

SOP-18 · Transaction monitoring

Expert pass wanted on: the rule family coverage per rail against desk practice; the register-not-instruction placement of all values; the new-account regime design; the alert content standard; the suppression governance; and the section 9 testing set against what FI expects to see evidenced.

SOP-19 · Alert investigation and escalation

Expert pass wanted on: the disposition set against real desk practice; the S4 contact wording constraints; the S5 four-eyes trigger list; aging thresholds; and whether the internal-report channel needs its own intake form.

SOP-20 · Reporting and goAML

Expert pass wanted on: the S3 refrain-versus-execute wording against PTL 4 kap; the drafting content list against what Finanspolisen actually values; the deputy-review design; register access mechanics in a small function; and the exit-timing coordination guidance.

SOP-25 · Regulatory change management

Expert pass wanted on: the source list's completeness for a Swedish EMI; the four-way gap classification against how real gap analyses are written; the interim-measure-as-deviation treatment; and the AMLR workstream's shape against how firms are actually running the transition.

REG-C · Conventions and registers

Calibration pass wanted from Augustinas on every numeric value above, and from Anilla on the C-2 snapshot composition and the C-7 conditional set. Values deliberately uneven; correct toward what a real desk runs, and the corrected values become canon for case authoring.
